NEDO human cDNA sequencing project supported by Ministry of Gonomoy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and
RAB; annotation: HRI and RAB.

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, cornary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        rubeosis; Osler-Webber Syndrome; myocardial angiogenesis; plaque neovascularisation; telangiectasia; haemophiliac joints; angiofibroma; wound granulation; coronary collateral; cerebral collateral; arteriovenous malformation; cerebral collateral; diabetic neovascularisation; fracture; cytostatic; antiathritic; antipsoriatic; antidiabetic; ophthalmological;

The patent discloses a DNA molecule encoding a fusion protein comprising a signal sequence, an immunoglobulin Fc region, and an angiogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that mays be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, theumatoid arthritis, psoriasis, ocular angiogenic diseases c. g. diabetic retinopathy, retinopathy of prematurity, macular celegeneration, corneal graft rejection, neovascular glaucoma, retrolental collibroplasia, rubboois and osler-Webber syndrome; mycocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a DNA encoding canine conduction, integrin used in the construction of immunofusin containing canine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

The novel factor is derived from endostatin (using PCR to screen a human footal kidney cell cDNA library) and human IgGIPc. The product of the invention can specifically inhibit tumour vascular endothelial proliferation and can be used for curing several tumour types. This sequence encodes a fusion construct composed of human endostatin and human IgGIPc, described in the disclosure of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 cacadecacedeceaerrecadecegrecrecaerrecaerrecaerraadadeceeerera 60
                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes an endostatin protein which is the carboxy terminal protein of human collagen XVII. Recombinant mouse endostatin (20 mg/kg) was administered subcutaneously to mice implanted with Lewis lung carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the angiogenesis inhibitory activity of endostatin. Thus the protein is useful for treatment of angiogenesis-dependent cancers. The polymucleotide and polypeptide sequences of this endostatin are useful for treating and diagnosis of tumours, ocular angiogenic diseases. Osler-Webber syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints,
                                                                                                                                                                                                                                                                       Novel endostatin capable of inhibiting endothelial cell proliferation and angiogenesis, useful for treating angiogenesis-dependent cancers and as birth control agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 CACACCCACCAGGACTTCCAGCTGGTGCTGCTGGTGGCCCTGAACAGCCCGCAGCCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine angiostatin, human or murine endostatin and angiogenesis-inhibiting fusions and fragaments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes an angiogenesis inhibiting factor (1), designated IAF-1. The present invention also describes: (1) preparation of (1) and its derivative; (2) an IAF binding acceptor and its preparation; and (3) an IAF antibody. (1) is useful for preparing new biological preparations for effectively treating various tumours and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   having angiostatin activity, a collegen XVIII fragment having endostatin activity, a collegen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used too inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours tumour metastasis, benign tumours including tumours, reachemas and pyrogenic granulomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis and osler Webber syndrome; mycoardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in the present sequence is a CDNA encoding human electric in gene therapy. The present sequence is a CDNA encoding human electric.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 GGGCTGGCCGGCACCTTCCGGGCCTTCCTGTCGTCGCGGCTGCAGGACCTCTACAGCATC 180

Endostatin is a 20 kD C-terminal fragment of collagen XVIII that inhibits angiogenesis. The endostatin coding sequence may be used in the recombinant viral vector of the invention for obtaining angiostatin activity. The vector comprises a promoter capable of expressing human angiostatin operably linked to a pructural gene encoding one or more domains of human angiostatin. The vector, which may be a replication-defective viral vector, is useful for inhibiting angiogenesis in a mammal, especially with cancer or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TTCTCCTTTGACGCCAAGGACGTCCTGAGGCACCCCACCTGGCCCCCAGAAGAGCGTGTGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        borne tumours, leukaemias, tumour metastases, benign tumours, e.g.

haemangioma, acoustic neuromas, neurofibromas, trachomas, and pyogenic

granulomas, rheumatoid arthritis, psoriasis, coular angiogenic diseases,
e.g., diabetic retinopathy, retinopathy of prematurity, macular

degeneration, corneal graft rejection, neovascular glaucoma, colon

cancer, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome,
myocardial angiogenesis, plaque neovascularisation, telangiectasia,
haemophiliac joints, angiofibroma, and wound granulation. Endostatin(TM)
is also useful for treating disease of excessive or abnormal stimulation
of endothelial cells such as intestinal adhesions, atherosclerosis,
scleroderma and hypertrophic scars. Higher yields of more purified, and
biologically active Endostatin(TM) are obtained by the new method.
C Endostatin(TM) can be stored in buffers for extended periods of time, and
also subjected to lyophilisation, while preserving biological activity.
C Centrifugation of broth from fermentation steps in production is avoided,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180

The specification describes multifunctional proteins which comprise combinations of angiostatin, endostatin, interferon, thrombospondin, interferon-inducible protein and platelet factor 4, and have anti-angiogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the proteins can be used for inhibiting the proteins calls (characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor. Growth. The present sequence is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Geceleratecionegaricos con contratos de cont

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in Streptomyces. Leader sequences of Streptomyces sp. strain CS SnpA and S. venezuelae alpha-amylase proteins are linked to the N-terminal of endostatin. This ensures that endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. The method is used for preparing soluble recombinant human, murine or primate endostatin, which is useful in the treatment of cancer, inhibition of tumour growth, inhibition of angiogenesis, isolation of receptors for endostatin and for identification of anti-angiogenic compounds in assays. The endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. Streptomycetes are amenable for cultivation in large fermentations allowing for large quantities of soluble endostatin to be produced.
                                                                                                                                                                                                                                                                                                                                  Nucleotide sequence of human endostatin encoded by plasmid pMALcH#15.

the DNA sequences encoding them. Angiogenesis is the generation of new blood vessels into a tissue, and normally occurs in wound healing, foetal and embryonal development and the formation of the corpus luteum, endometrium and placenta. Angiostatin is a protein (see AAB16450 and AAA68202) involved in angiogenesis, and has an amino acid sequence similar to that of a plasminogen fragment (see murine plasminogen AAB16490). Angiostatin has the ability to inhibit angiogenesis. Endostatin is also an angiogenesis inhibiting protein (see AAB16451 and AAA68203). Sequences AAA68242 and AAB16452 represent coding and protein sequences of human laminin. Laminin is an angiostatin binding protein, and some of the peptides of the invention share homology with regions of laminin. Peptides AAB16452-B16521 (excluding AAB16490) are the angiogenesis-inhibiting protein receptor fragments of the invention. The peptides had an angiostatin and can be used in methods the angiostatin or endostatin and can be used in methods
                                                                                                                  This invention relates to angiogenesis-inhibiting protein receptors, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for treating diseases and processes that are mediated by angiogenesis, such as solld tumours, psoriasis, scleroderma, myocardial angiogenesis, crown's disease, cerebral collaterals, arteriovenous malformations, rubeosis, diabetic retinopathy, arthritis, wound healing, peptic ulcers, Helicobacter related diseases, fractures, placentation and cat scratch fever. They are useful for the detection and prognosis of cancer. DNA sequences A628204-A628241 encode the peptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 552 BP; 83 A; 196 C; 179 G; 94 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumation arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of prematurity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubocsis, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent alseases include osler-webber syndrome, mycardial angiogenesis, plaque neovasculisation, telangiectasia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 GGGCTGGCGGCACCTTCCGCGCCTTCCTGTCCTCGCGCCTGCAGGACCTGTACAGCATC

c a composition comprising a protein that is homologous to PITSIRE

protein kinases (PK) and an angiogenic factor. The method is useful

for regulating angiogenesis related to cancer, arthritis, macular

degeneration, and diabetic retinopathy. The compositions are useful

for inhibiting angiogenic-related diseases. The method and

compositions are useful in treating diseases and processes that are

mediated by angiogenesis including haemangioma, solid tumours, blood

borne tumours, leukaemia, metastasis, telangiectasia, psoriasis,

corner typogenic granuloma, myocardial angiogenesis, Crobn's

clisease, plaque neovascularisation, coronary collaterals, cerebral

collaterals, arteriovenous malformations, ischaemic limb angiogenesis,

corneal diseases, rubeosis, neovascular glaucoma, diabetic retinopathy,

retrolental fibroplasia, arthritis, neovascular glaucoma, diabetic retinopathy,

retrolental fibroplasia, arthritis, pebtic ulcer, Helicobacter related

diseases, fractures, keloids, vasculogenesis, haematopoiesis,

menstruation, placentation, and cat scratch fever. The minimal side

the invention provides a therapy for cancer that has minimal side

custored the present sequence encodes human endostatin which is

Sequence 30, Application US/09206059

Patent No. 6201104

Patent No. 6201104

APPLICANT: MacDonald, Nicholas

APPLICANT: Sim, Kim Lee

TITLE OF INVENTION: Proteins and Methods of Use

TITLE OF INVENTION: Proteins and Methods of Use

TITLE OF INVENTION: Proteins and Methods of Use

CURRENT APPLICATION UNMER: US/09/206,059

CURRENT FILING DATE: 1998-12-04

NUMBER OF SEQ ID NOS: 80

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 30

LENGTH: 552
